

Demolition Site Security Checklist (GTA)

ALMAR Demolition - GTA Owner Guide 2026

Set Up A Secure Site

1 Fence the full work zone

Continuous fencing or hoarding around the whole footprint before demolition starts.

2 Set one controlled gate

A single lockable entry with keys held by the site lead.

3 Lock out the utilities

Power, gas, and water capped by the proper trades and tagged off.

4 Add lighting and cameras

Motion lights and visible cameras, or a monitored unit for higher-risk sites.

Keep It Secure Day To Day

1 Contain dust and debris

Screening, covered bins, and daily cleanup of the site and any shared path.

2 Post signs and a contact

Warning signs and a site contact number at the gate.

3 Do a daily close-out

Walk the perimeter, confirm the gate is locked and utilities are off.

4 Keep a dated record

Weekly site photos, permit, receipts, and proof of liability insurance.
